

## M27 Course

### Coloproctology Course for Surgical Trainees

This is the fifteenth M27 course, an 'essentials in coloproctology' course, held under the auspices of the Association of Coloproctology. This course is designed to provide sufficient basic knowledge in coloproctology from which surgical trainees can base their subsequent surgical practice.

The course fees are kept at a level which should allow study leave funding to be easily available. Accommodation may also be available at reasonable rates. There will be a 'course curry' in the evening on the 15<sup>th</sup> of November.
