

The Management of Anorectal Pelvic Floor Disorders

11-12 December 2012

RCS London

Pelvic floor disorders form a large part of the workload of the colorectal surgeon. This practical course, using unembalmed freeze-preserved, builds on the progress achieved in this area in the Coloproctology Stage II course and provides further training, both theoretical and practical, for the middle grade to senior trainee in this important area of coloproctology.

Course content

Participants will learn about the causes and management of:

- Anal incontinence
- Obstructed defaecation
- Anismus

Who should attend?

ST5-8

Course fee

£975

Course Director

Mr Dermot Burke

Consultant Surgeon

St James Hospital, Leeds

Specialty Tutor in Coloproctology,

Royal College of Surgeons of England

Further information

There will be the opportunity for hands on training in surgical techniques on both animal and unembalmed freeze-preserved material, in an area that is currently underutilised during the training process. The aim is to provide trainees with the background to the nature of these disorders and to demonstrate both conservative and surgical approaches.

Key learning outcomes

- Understand the anatomy and physiology of the pelvic floor
- Assess a patient with a pelvic floor disorder
- Prescribe conservative treatments for disorders of the pelvic floor
- Perform a range of surgical procedures for disorders of the pelvic floor
