

Excellent course – it genuinely made a difference to help me consolidate my knowledge in cancer genetics and family history

2024 delegate

Virtual Cancer Genetics Course

19 May – 8 July 2025

This virtual course will teach the core concepts of risk stratification using family history as a tool to enable patients to access appropriate management strategies. The course is designed for all healthcare professionals working in primary care and specialist settings including oncology, breast care, gynae-oncology, gastroenterology and screening services.

Participants will be equipped with the basics of cancer genetic counselling and sessions will include approaches to genetic testing, management of hereditary cancers and consent taking.

If you are looking to start mainstream genetic testing or learn about family history assessment you will benefit from our step by step approach to learning and application to practice.

The course fee includes access to our Nucleus online modules 'Cancer Genomics: The Essentials' and the recently launched 'Consent Conversation.'
