

# Stomas in the Emergency Room Webinar 3 June 2024 at 7 pm (BST)

Sometimes the most difficult decisions we make in emergency surgery surround the smallest of problems but with the greatest consequences for our patients.

This webinar uses real cases and expert panel discussion to discuss issues concerning the creation of stomas in difficult situations, management of acute stoma problems such as ischaemia and retraction, and what to do with the emergency presentation of a parastomal hernia.

We don't have all the answers, but we definitely have a wealth of experience between us and can pass on some useful tips and tricks which may make your next emergency cover a little less stressful.

**An opportunity to broaden your knowledge, don't miss it!**
